

Business Edition on Oracle

Qubole offers Qubole Data Service (QDS) Business Edition at no cost but usage is limited to 30,000 Qubole compute hours (QCPU) per month - a \$1000 value. Each QDS account can utilize any number of cloud-optimized data engines, including Spark, Hadoop, Hive and Presto to power queries. To start using Qubole you, need to authenticate QDS with your Oracle Cloud account to access the data in your own Oracle Cloud Object Storage. Unique to QDS, you will not have to ingest or migrate any of your data from your Oracle Cloud Object Storage repositories before processing workloads.

FAQ:

What is a QCPU unit and how will Oracle Cloud charges be calculated?

The Qubole Compute Processing Unit (QCPU) is similar to an **Oracle Compute Unit (OCPU)**, and is based on the number of compute cores in the compute instance type (**shape**). QDS uses a multiplier for other instance types. Please [click here](#) to learn more about QCPU.

Qubole Business Edition is free, but usage is limited to 30,000 QCPU every month (worth approximately \$1000). You must provide your own Oracle Bare Metal Cloud account and you are responsible for Oracle Cloud costs. Once you setup and authenticate with your Oracle Cloud account to process data, you will need to pay Oracle Cloud directly for the computing resources that Qubole manages.

How do I get started working with my own data?

Because no data migration is necessary, as soon as you authenticate with your Oracle Cloud account you can start querying right away using Spark, Hadoop, Hive, Presto, Pig, and more services available to all QDS users.

Is Business Edition recommended for production usage?

Yes, Qubole recommends Business Edition for production usage. However, to get the full benefits of the QDS platform such as lower TCO, performance optimization and automation, upgrade to the Enterprise Edition.

When should I switch from Business Edition to Enterprise Edition?

Once you are consistently reaching/exceeding your monthly limit of 30,000 QCPU, upgrade to Enterprise Edition. You can contact us through the subscription upgrade page within the product or by filling up the [contact us](#) form.
